Projects

Online Car Rental [🔗](#)

The online car rental project is a user-friendly platform that facilitates the seamless booking and management of rental vehicles over the internet. This system allows users to browse a diverse fleet of cars, select their preferred vehicle based on criteria like model and rental duration, and complete reservations securely. Users can also access comprehensive information about each car, including features and pricing details. The platform streamlines the rental process, incorporating secure payment gateways and reservation tracking..

Password Generator [🔗](#)

The Password Generator Project is an application designed to enhance online security by creating strong, randomized passwords. Employing principles of cryptography and secure programming, the project generates unique combinations of characters, numbers, and symbols, bolstering defense against unauthorized access. Users can customize password length and complexity, tailoring security to their specific needs.

Facebook Old Login Page [🔗](#)

The "Facebook Old Login Page" project seeks to recreate and revive the classic user interface of Facebook's login page, reminiscent of its earlier design. This nostalgic endeavor aims to provide users with a familiar and comforting experience, reminiscent of the platform's earlier days. Through thoughtful design and attention to detail, the project encapsulates the essence of the original login page, allowing users to indulge in a trip down memory lane while navigating the familiar interface.
